Four color theorem - Wikipedia In mathematics, the four color theorem, or the four color map theorem, states that, given any separation of a plane into contiguous regions, producing a figure called a map, no more than four colors are required to color the regions of the map so that no two adjacent regions have the same color. Four-Color Theorem -- from Wolfram MathWorld Four-Color Theorem The four-color theorem states that any map in a plane can be colored using four-colors in such a way that regions sharing a common boundary (other than a single point) do not share the same color. The Four-Color Problem: Concept and Solution In 1879, A. Kempe (1845â€“1922) published a solution of the four-color problem. That is to say, he showed that any map on the sphere whatever could be colored with four colors.

The Four Colour Theorem : nrich.maths.org The Four Colour Theorem and Three Proofs. For the mathematically persistent the following website has an intriguing new approach to attacking the problem of constructing a new algorithm for solving the problem, and tying to reduce the reliance on a computer. These problems are original problems, they only appear here - and they are presented by a member of our staff, Mr. junio. Four-colour problem - Encyclopedia of Mathematics The numerous attempts to solve the four-colour problem have influenced the development of certain branches of graph theory. In 1976 an affirmative answer to the four-colour problem, with the use of a computer, was announced (cf.

The Notorious Four-Color Problem - University of Kansas The Solution of the Four-Color Problem More About Coloring Graphs Coloring Maps History The History of the Four-Color Theorem I 1879: Alfred Kempe proves the Four-Color Theorem (4CT): Four colors suffice to color any map. I 1880: Peter Tait finds another proof. That was that. I 1890: Percy John Heawood shows that Kempe's proof was wrong. The Four Color Map Theorem - Numberphile The Four Color Map Theorem (or colour!?) was a long-standing problem until it was cracked in 1976 using a "new" method... computers! Formal Proofâ€”The Four-Color Theorem Part of the appeal of the four color problem is that its statement Theorem 1. The regions of any simple planar map can be colored with only four colors, in such a way ... The first step in the proof of the Four-Color Theorem consists precisely in getting rid of the topology, reducing an infinite problem in analysis to a finite problem in.
